Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-27 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Applicant's admitted prior art Brenneman et al.

Brenneman et al. teach a device to determine blood glucose concentrations that has multiple sensors(43) in sensor cavities (54A-J) that contain the appropriate reagents to perform the desired test that have been read on the claimed plurality of sensors. The device has an outer housing(36) that has been read on the claimed housing. The sensors are electrically connected to a microprocessor or the like to stored and/or analyzed the generated data which has been read on the claimed electrical contacts and the meter. A sensor pack(32) is circular and houses the multiple sensors and has been read on the claimed transport member. A sample is applied to a test strip that is mounted in a holder that is rotated and automatically locates the appropriate sensor. Column 5 teaches the sensor becoming lodged in the testing position projecting out from the testing end (46) and the "slide actuator (42)" which have been read on the claimed "... means within the housing which urge the stack of sensors towards the transport member ...". Brenneman et al. teach the sensors must be maintained in a controlled environment such as a sealed container with a desiccant

and further teach each sensor enclosed within housing(36) by upper case(38) and lower case(40) which has been read on the claimed sealing means .

Applicant's are encouraged to supply the other non-USP references cited on pages 1-2 as they are not readily available to the Office.
